PROCEEDINGS

of the Union of Scientists – Ruse

ISSN 1314-3077

Proceedings of the Union of Scientists – Ruse

Contains five books:

1. Technical Sciences
2. Medicine and Ecology
3. Agrarian and Veterinary Medical Sciences
4. Social Sciences
5. Mathematics, Informatics and Physics

BOARD OF DIRECTORS OF THE US - RUSE

1. Prof. Hristo Beloev, DSc – Chairman
2. Assoc. Prof. Vladimir Hvarchilkov – Vice-Chairman
3. Assoc. Prof. Teodor Iliev – Secretary in Chief

SCIENTIFIC SECTIONS WITH US - RUSE

1. Assoc. Prof. Aleksandar Ivanov – Chairman of "Machine-building Sciences and Technologies" scientific section
2. Prof. Ognjan Alipiev – Chairman of "Agricultural Machinery and Technologies" scientific section
3. Assoc. Prof. Ivan Evtimov – Chairman of "Transport" scientific section
4. Assoc. Prof. Teodor Iliev – Chairman of "Electrical Engineering, Electronics and Automation" scientific section
5. Assist. Prof. Diana Marinova – Chairman of "Agrarian Sciences" scientific section
6. Svilen Dosev, MD – Chairman of "Medicine and Dentistry" scientific section
7. Assoc. Prof. Vladimir Hvarchilkov – Chairman of "Veterinary Medical Sciences" scientific section
8. Assist. Prof. Anton Nedjalkov – Chairman of "Economics and Law" scientific section
9. Assoc. Prof. Tsetska Rashkova – Chairman of "Mathematics, Informatics and Physics" scientific section
10. Assoc. Prof. Ljubomir Zlatev – Chairman of "History" scientific section
11. Assoc. Prof. Rusi Rusev – Chairman of "Philology" scientific section
12. Prof. Penka Angelova, DSc – Chairman of "European Studies" scientific section
13. Prof. Antoaneta Momchilova - Chairman of "Physical Education, Sport and Kinesiterapy" section

CONTROL PANEL OF US - RUSE

1. Assoc. Prof. Jordanka Velcheva
2. Assoc. Prof. Nikolai Kotsev
3. Assist. Prof. Ivanka Dimitrova

EDITOR IN CHIEF OF PROCEEDINGS OF US - RUSE

Prof. Zlatojivka Zdravkova

The Ruse Branch of the Union of Scientists in Bulgaria

was founded in 1956. Its first Chairman was Prof. Stoyan Petrov. He was followed by Prof. Trifon Georgiev, Prof. Kolyo Vasilev, Prof. Georgi Popov, Prof. Mityo Kanev, Assoc. Prof. Boris Borisov, Prof. Emil Marinov, Prof. Hristo Beloev. The individual members number nearly 300 recognized scientists from Ruse, organized in 13 scientific sections. There are several collective members too – organizations and companies from Ruse, known for their success in the field of science and higher education, or their applied research activities. The activities of the Union of Scientists – Ruse are numerous: scientific, educational and other humanitarian events directly related to hot issues in the development of Ruse region, including its infrastructure, environment, history and future development; commitment to the development of the scientific organizations in Ruse, the professional development and growth of the scientists and the protection of their individual rights.

The Union of Scientists – Ruse (US – Ruse) organizes publishing of scientific and popular informative literature, and since 1998 – the "Proceedings of the Union of Scientists- Ruse".

SOFTWARE SYSTEM FOR DIGITAL ANALYSIS OF FINGERNAIL IMPRINTS IN FORENSIC MEDICINE

Rumen Rusev

Angel Kanchev University of Ruse

Abstract: *This paper describes the design and implementation of a software product for digital image analysis of nails imprints on human skin. Its purpose is to create a set of objective criteria for a complete match or similarity between the nail imprints on human victims of a crime with the fingernails of the possible suspect. The software product was created mainly for the needs of the forensic medicine.*

Keywords: *Software system, digital analysis, image processing, forensic medicine, fingernail imprints.*

INTRODUCTION

In the field of the forensic science more and more often methods are used for matching marks on human skins and the possible objects that caused them [5]. Such marks are traces of bites, blunt object hits, fingernails imprint and others. In the contemporary forensic science such finds are documented with digital photos and further analysis often comes down to the visual comparison of the found mark with the possible causer. There are a number of methodologies [2, 5] which allow, based on a number of numerical distance measurements in a nail imprint, to find its most probable match. In order to avoid the subjective distortion, the errors caused by geometrical deformations and the perspective deformations during the process of getting the image a software product is offered that allows an accurate size measurement of the marks on the digital image with error compensation.

PROBLEM DEFINITION

During the process of collecting evidence in the forensic medicine very often are present fingernail imprints on the human skin. For the further analysis are created digital images of the relevant sections. In order to be able to measure the size and the distances in the image is included a measurement line so that it is possible to match a part of the imprint with a part of the measurement line. This is done in order to be able to achieve relatively accurate measures. Normally the object and the measurement line are not parallel to the sensor of the digital camera which causes perspective distortion of the size. The main purpose of the software product described in this paper is to develop an approach which after calibrating the software with a measurement line to allow getting accurate sizes in millimetres with the option for possible perspective deformation. Such digital data from a couple of nail imprints would allow accurately measure how close the two imprints match.

CHOICE OF GEOMETRICAL CHARACTERISTICS FOR COMPARISON

On Fig. 1 images are shown of a nail imprint on a human face of a deceased person. Apart of the examined mark is also showed the measurement line according to which can be determined the actual sizes of the imprint.

Fig.1. Image of fingernail imprints on a human face

In order to look for the person who left this mark is necessary to obtain the nail imprints on an imitation of human skin which is used in the forensic medicine. – EC1 Petrolatum [1, 5]. This is done when applying perpendicular pressure on the surface as shown on Fig. 2 a) which produces the imprints shown on Fig. 2 b).

Fig.2. Nail imprints on an imitation of human skin

The next important step is to determine the parameters that characterize the fingernail imprint. After discussions with forensic science experts and the conduction of multiple experiments and data analysis were chosen the parameters, shown on Fig. 3 – the values x_1 , x_2 , a , b , c_1 and c_2 . The distance between the ends of the nail imprint is denoted with x . The distance b is the maximum between the line x and the furthest point from the mark. This perpendicular splits x into two segments, denoted on the figure 3 with x_1 and x_2 . The perpendicular distances from the middle points of x_1 and x_2 to the impact contour are marked as c_1 and c_2 . The a value is calculated analogically to c_1 and c_2 with respect to the line x .

Fig.3. Parameters that characterize the fingernail imprint

This methodology allows obtaining of 6 independent parameters which could be used for statistical analysis that'll allow calculating the degree of similarity of two different fingernail imprints.

SYSTEM IMPLEMENTATION AND RESULTS

The designed and developed for the needs of the forensic science software has the following functionalities:

- visualisation of a digital image;
- pre-processing for image enhancement [3,4];
- calibrating after interactive specifying two points from the image for which the actual world distance is known;
- manual selection of the two ends of the examined fingernail imprint segment;
- manual selection of the highest point of the fingerprint curve;
- automatic calculation of the distance b (see Fig. 3);
- automatic construction of the perpendicular lines that determine c_1 and c_2 and manual selection of the intersection points with the contour;
- automatic calculation of the distances c_1 and c_2 ;

Fig.4. User interface and calibration of the system

On Fig. 4 is shown the user software interface and the process of system's calibration based on known world distance from the image.

Fig.5. Process of measuring

On Fig. 5 is shown the measuring process of the values of x and b . To achieve the best precision the image is zoomed in.

After the completion of all the activities are obtained the values of all 6 parameters. They can be saved in a file for further analysis and comparisons with other fingernail imprints.

CONCLUSION

As a result of the described project was developed a software product. It can be used for the automation of the forensic scientists' work in the fingernail imprints analysis and comparison. The use of the software decreases the measure errors and can compensate for the perspective distortions in the images taken by digital cameras. The same approach could be used in any cases where is needed measurement of distances in digital images. The software system can be further developed through including functionality for an automated comparison of marks against another fingernail imprint or searching in a database with a certain degree of match.

**СОФТУЕРНА СИСТЕМА ЗА ЦИФРОВ АНАЛИЗ НА ОТПЕЧАТЪЦИ ОТ
НОКТИ ЗА НУЖДИТЕ НА СЪДЕБНАТА МЕДИЦИНА**

Румен Русев

Русенски университет "Ангел Кънчев"

Резюме: Тази статия описва проектирането и реализацията на програмен продукт за цифров анализ на изображения от отпечатъци на нокти върху човешка кожа. Целта е чрез него да се получат обективни критерии за съвпадението или сходството отпечатъци от нокти върху хора, жертви на престъпление с тези на заподозрени за извършването му лица за нуждите на съдебната медицина.

Ключови думи: софтуерна система, цифров анализ, обработка на изображения, съдебна медицина, отпечатъци от нокти.

Requirements and guidelines for the authors - "Proceedings of the Union of Scientists - Ruse" Book 5 Mathematics, Informatics and Physics

The Editorial Board accepts for publication annually both scientific, applied research and methodology papers, as well as announcements, reviews, information materials, adds. No honoraria are paid.

The paper scripts submitted to the Board should answer the following requirements:

1. Papers submitted in English are accepted. Their volume should not exceed 8 pages, formatted following the requirements, including reference, tables, figures and abstract.

2. The text should be computer generated (MS Word 2003 for Windows or higher versions) and printed in one copy, possibly on laser printer and on one side of the page. Together with the printed copy the author should submit a disk (or send an e-mail copy to: vkrr@ami.uni-ruse.bg).

3. Compulsory requirements on formatting:

~ font - Ariel 12;

~ paper Size - A4;

~ page Setup - Top: 20 mm, Bottom: 15 mm, Left: 20 mm, Right: 20mm;

~ Format/Paragraph/Line spacing - Single;

~ Format/Paragraph/Special: First Line, By: 1 cm;

~ *Leave a blank line under Header - Font Size 14;*

~ Title should be short, no abbreviations, no formulas or special symbols - Font Size 14, centered, Bold, All Caps;

~ *One blank line - Font Size 14;*

~ Name and surname of author(s) - Font Size: 12, centered, Bold;

~ *One blank line - Font Size 12;*

~ Name of place of work - Font Size: 12, centered;

~ *One blank line;*

~ abstract – no formulas - Font Size 10, Italic, 5-6 lines ;

~ keywords - Font Size 10, Italic, 1-2 lines;

~ *one blank line;*

~ text - Font Size 12, Justify;

~ references;

~ contact address - three names of the author(s) scientific title and degree, place of work, telephone number, Email - in the language of the paper.

4. At the end of the paper the authors should write:

~ The title of the paper;

~ Name and surname of the author(s);

~ abstract; keywords.

Note: The parts in item 4 should be in Bulgarian and have to be formatted as in the beginning of the paper.

5. All mathematical signs and other special symbols should be written clearly and legibly so as to avoid ambiguity when read. All formulas, cited in the text, should be numbered on the right.

6. Figures (black and white), made with some of the widespread software, should be integrated in the text.

7. Tables should have numbers and titles above them, centered right.

8. Reference sources cited in the text should be marked by a number in square brackets.

9. Only titles cited in the text should be included in the references, their numbers put in square brackets. The reference items should be arranged in alphabetical order, using the surname of the first author, and written following the standard. If the main text is in Bulgarian or Russian, the titles in Cyrillic come before those in Latin. If the main text is in English, the titles in Latin come before those in Cyrillic. The paper cited should have: for the first author – surname and first name initial; for the second and other authors – first name initial and surname; title of the paper; name of the publishing source; number of volume (in Arabic figures); year; first and last page number of the paper. For a book cited the following must be marked: author(s) – surname and initials, title, city, publishing house, year of publication.

10. **The author(s) and the reviewer, chosen by the Editorial Board, are responsible for the contents of the materials submitted.**

Important for readers, companies and organizations

1. Authors, who are not members of the Union of Scientists - Ruse, should pay for publishing of materials.

2. Advertising and information materials of group members of the Union of Scientists – Ruse are published free of charge.

3. Advertising and information materials of companies and organizations are charged on negotiable (current) prices.
